Innoprise Community Development software automates the creation, issuance, and tracking of public sector community development activities. Our solution encompasses required end-to-end business processes that support government planning, zoning, permitting, building plan review, building inspections, licensing, and code enforcement functions. This gives your organization a significant advantage in reducing maintenance, simplifying changes, and lowering overall total ownership costs.

In addition, our software helps provide your citizens with “self-service” access points using the Web and kiosks.

We Deliver. You Succeed.

Innoprise Suite: Your ERP & CIS Solution

MS Govern is a best of breed software provider that has helped more than 500 public sector organizations throughout North America succeed for the past 30 years. From Accounting to Zoning, MS Govern has the tools you need to function as a cost-effective, smoothly running government entity. We offer full ERP solutions, customer information systems, and community development software.

Innoprise Community Development

“We wanted a fully integrated, Web-based Community Development system…with Innoprise, we can easily deploy the application in the field to our inspectors…and provide online electronic plan review and submittals for our customers as well.”

-- Jeff Brasel
Principal Planner
City of Centennial, CO

Permits and Inspections
Monitor permits and inspections throughout the approval process. Use a variety of search methods to view, print, email, or send permits to Microsoft Excel®. Attach electronic files of any type to permits, reviews, and inspections.

Planning and Zoning
Track each project through its approval process. Proposed development must go through a development review process during which the plans are approved or rejected. This module also incorporates a Committee function to create agendas, member notifications, and meeting minute records.

Occupational Licenses
Manage the permit process for residential and commercial occupational licenses by tracking and issuing business licenses. Define business license types with one or more fee structure(s). Follow a license through its review and inspection process. Issue penalties for late payments. Renew licenses annually if desired.

Code Enforcement
Define code infractions associated with your state's legal statute description. The system automatically assigns a case number to each code infraction, making it easy for you to track the case until the party comes into compliance. If the party does not come into compliance, send a notice to the Code Board directly from the system: it automatically generates required case documentation and attaches it to the related case, simplifying the process for you and your employees.
